

## CWP40H35...MC Support Channel

1.5 Sheet thickness 1.5 mm

### Information

#### Usage

Supporting panels in systems for sloping roofs and flat roofs, mounting panels to the supporting system

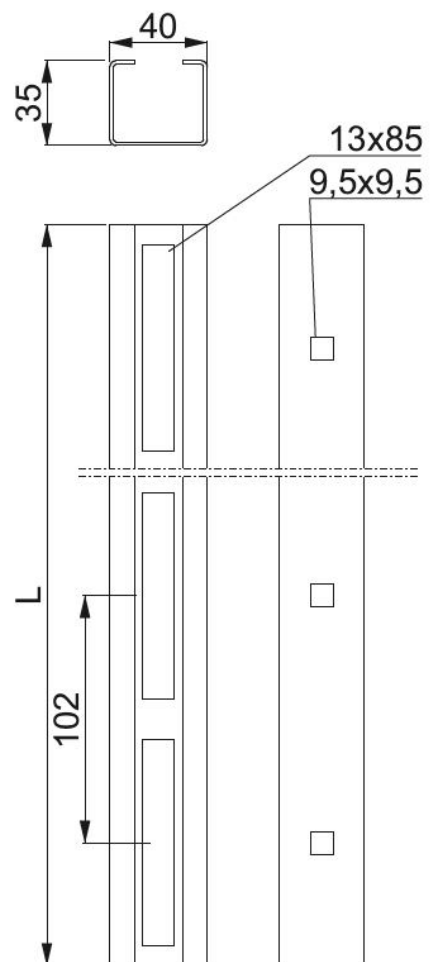

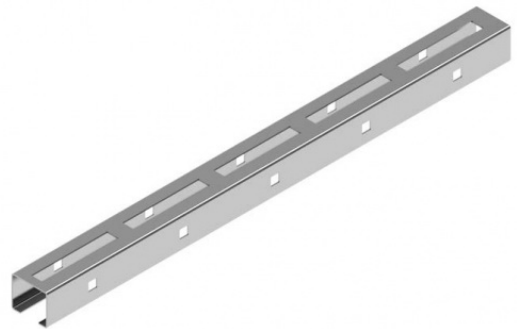

#### Material

S250GD steel in:

Magnelis®, MagiZinc®, PosMAC coating

#### Additional information

- stable support of panels in pitched roof systems and flat roofs, assembly of panels to the supporting system - thanks to the use of structural steel, channel sections are characterized by very high endurance parameters - 13x85 holes allow for mounting profiles to handles anywhere without drilling - 9.5 mm square holes in the sides of the channel allow screwing on additional equipment, e.g. cable trays, power optimizers
